

On-Board Table Raise & Lower Buttons

**DID
YOU
KNOW**

No Foot Switch Required

Hey there Subscriber,

Did you know?

The S211 and S222 table control boards have built-in raise and lower buttons directly on the logic board.

Located in the lower right corner of the board, these two buttons allow you to move the table **without connecting the foot switches or external controls**.

- Top button:** Raises the table
- Bottom button:** Lowers the table

This feature is especially useful during troubleshooting, setup, or service when external switches are not connected.

A quick press can help verify board function and table movement before moving on to additional diagnostics.
