Seasoning

Hey there Subscriber,

Tube seasoning is a critical step in maintaining X-ray system performance and extending tube life, especially after installation or service work.

Our systems support **Auto** and **Manual Tube Seasoning** modes. Auto Tube Seasoning can be done directly through the calibration menu by following the on-screen prompts. Manual Tube Seasoning may be used when needed, with gradual kV step increases and adequate wait time between exposures.

If an error occurs during seasoning, remain at the same kV level and reduce mA incrementally until the error clears before proceeding.

For detailed steps and guidance, please reference the Installation and Service Manual or reach out to Technical Support if you have questions.

The attached Summit Tube Seasoning document provides step by step instructions and additional detail for both methods 🙋 :
