

Safety in Every Exposure

CONTROL, TIMING, & SAFETY SYSTEMS

Hey there Subscriber,

Radiographic systems are built with safeguards outlined by the **FDA** to keep every exposure safe and under operator control.

They include **manual controls**, **timers**, and **automatic shutoffs** to prevent unintended exposures, along with **safety interlocks** and **clear labeling** for reliable, compliant operation.

Manufacturers also provide detailed **documentation and setup instructions** to ensure proper use, installation, and ongoing compliance.

👉 See the document for more details on radiographic safety and control standards.
